Summary

AI engineer since 2018. I build AI products at Mudita Studios and work on Agent Experience in the open. Previously, I owned the Agent Experience programme at Firecrawl; before that, production ML in search, recommendations and computer vision.

Experience

AI Product Engineer | Mudita Studios, Remote May 2026 - Present

- Built a coding agent from an empty repository that turns Slack and Jira requests into GitHub draft pull requests, with sandboxed execution, a browser QA agent, a second-model judge, and human review before delivery.
- Main engineer on a research product in production: data connectors, source-backed answers, claim checks, citation regression tests, and the end-to-end test harness and release gates.
- Set up the delivery platform for a second product: CI/CD, preview environments, and daily smoke tests.

Agent Experience Engineer | Firecrawl, Remote May 2026 - September 2026

- Owned the Agent Experience programme and built its harness from the first commit: real coding agents in sandboxes against any version of the MCP server, CLI, SDKs, and skills, with judges, cost caps, and an A/B test before each release.
- Built daily discoverability runs, retrievability tracking, and weekly Deep Insights checked against raw agent runs; the discovery metric joined the Q3 top-of-funnel dashboard, and the findings fixed pricing, billing, and docs pages.
- Rebuilt the hosted MCP server on Firecrawl OAuth (grants database, keyless and account endpoints), replacing API keys in URLs. It serves the Claude and Codex connectors and loads half the tokens with no loss in task success.
- Agent Experience DRI for the Developer Index, Life Sciences, and Government and Legal launches. Agents reaching the paper index went from 0% to 100% of test runs, and Claude Code searches going to Firecrawl from 0% to 100%.

Senior AI Engineer | Knit, Remote May 2025 - April 2026

- Built an agentic research platform that turns survey data into checked insights, charts, and presentations, cutting report turnaround from 2-3 days to under an hour.
- Built a sandbox for AI-generated Python analysis with agents that check results, plus parallel execution and tracing.

Senior Research Engineer | Epic! for Kids, Remote February 2023 - May 2024

- Owned machine learning pipelines for discovery, recommendations, and search; rebuilt search autocomplete, improving results in more than 80% of evaluated cases.

Senior Research Engineer | Tangible Play (Osmo), Remote September 2019 - February 2023

- Led computer vision for educational worksheets across India and US teams, improving accuracy from 93% to 98%.

Deep Learning Engineer | Whodat, Bangalore July 2018 - August 2019

- Built a C++ visual feature detector that ran 20% faster than the ORB-SLAM baseline for augmented reality.

Public work

Agent Experience: a field guide to agent-facing products at agentexperience.tech, with an agent-readiness rubric and a public, read-only MCP server; maintain Awesome Agent Experience.

Qwen3.6-35B on a consumer GPU: a 35B mixture-of-experts model at 43 tokens per second with 128K context on an 8 GB GPU.

Skills

Agents and AI systems: MCP, CLI and SDK design, agent orchestration, sandboxed execution, evals and A/B experiments, RAG.

Engineering: Python, TypeScript, C++, FastAPI, PostgreSQL, Redis, Docker, Kubernetes, CI/CD, OpenTelemetry.

Machine learning: PyTorch, TensorFlow, computer vision, search, recommendations, fine-tuning, local inference.

Education

IIT (BHU) Varanasi, Integrated Dual Degree, Computer Science and Engineering, GPA 9.28/10

2013 - 2018

SN Bose Scholar (2017), UC Berkeley research intern with Professor Dawn Song.
