

Himadri Mishra

Senior AI Engineer | Agent Experience

Remote, India | +91-9918889939 | himadri.jobhunt@gmail.com

himadri.dev | github.com/hmishra2250 | linkedin.com/in/hmishra2250

Summary

AI engineer since 2018, with recent work on agent tools and research automation, backed by experience in search and computer vision. I build tools agents can use, check the quality of their work, and make failures easier to recover from.

Experience

AI Product Engineer

Mudita Studios | Remote

May 2026 - Present

- Built Forge end to end, a coding agent that turns Slack and Jira requests into GitHub draft pull requests. Added isolated code execution, browser checks, and human review before delivery.
- Built core Zoe Auto workflows for company research: source-backed answers, claim checks, and report drafts. Added regression tests for citations, missing evidence, and unsupported numbers.
- Created reusable design-system and agent setup workflows, with shared components and design tokens to keep generated interfaces consistent.

Agent Experience Engineer

Firecrawl | Remote

May 2026 - September 2026

- Aligned Model Context Protocol (MCP), command-line, and SDK tool descriptions, documentation, and routing. Made MCP instructions reflect available tools and sign-in state.
- Built SDK methods and improved command-line credential and project setup, with regression tests. Added safe sign-in diagnostics without exposing tokens or API keys.
- Added browser-session entry points to MCP tools. Updated the server runtime and fixed request handling and recovery, with smoke and regression tests.
- Designed repeatable tests across APIs, command-line tools, and MCP to check recovery instructions and agent handoffs. Documented invalid runs and measurement limits.

Public work

Agent Experience

agentexperience.tech

- Built a public field guide and read-only MCP service that lets agents search guides and retrieve review criteria. Published templates for reviewing tool choice, failures, and handoffs.
- Maintain Awesome Agent Experience, a curated library of papers, specifications, and practical references for building and evaluating agent-facing products.

Skills

Agent and AI systems: MCP, CLI and SDK design, API integration, workflow orchestration, retrieval-augmented generation (RAG), evaluation, human review, error recovery.

Engineering: Python, TypeScript, C++, FastAPI, PostgreSQL, pgvector, Redis, Elasticsearch, Docker, Kubernetes, CI/CD, OpenTelemetry, Langfuse.

Machine learning: PyTorch, TensorFlow, computer vision, search, recommendations, model comparison, fine-tuning.

Himadri Mishra | Experience continued

Senior AI Engineer

Knit | Remote, India

May 2025 - April 2026

- Built a research reporting platform that turned survey data into checked insights, charts, and presentations. Reduced report turnaround from 48-72 hours to under one hour.
- Built a sandbox for AI-generated Python analysis, with separate agents checking the results before they reached a report.
- Built parallel task execution and shared Python services for reports, questionnaires, and slides, with model routing and execution tracing.

Independent ML Engineer (Freelance)

Stealth Product Team | Remote, India

March 2025 - April 2025

- Built a text-to-vector-icon pipeline using 18,000 curated icons, from model comparison and fine-tuning to segmentation and vector output.

Career break

Personal sabbatical.

May 2024 - February 2025

Senior Research Engineer

Epic! for Kids | Remote, India

February 2023 - May 2024

- Owned machine learning pipelines for discovery, recommendations, and search. Rebuilt search autocomplete, improving results in more than 80% of evaluated cases.
- Reduced Docker build time by 50% and cut platform costs by a factor of 10 through infrastructure improvements.

Senior Research Engineer

Tangible Play (Osmo) | Remote, India

September 2019 - February 2023

- Led computer vision work for educational worksheets across India and US teams. Improved accuracy from 93% to 98% and built real-time models for recognizing shaded regions.
- Led tracing-game development that increased engagement by 20%. Prototyped live feedback and automated tagging.

Deep Learning Engineer

Whodat | Bangalore, India

July 2018 - August 2019

- Built a C++ visual feature detector that ran 20% faster than the ORB-SLAM baseline for augmented reality.

Education and recognition

Indian Institute of Technology (BHU), Varanasi

2013 - 2018

Integrated Dual Degree, Computer Science and Engineering | GPA: 9.28/10

- **Kaggle FIDE and Google Efficient Chess AI Challenge (2025):** ranked 60 of 1,120 participants, top 6% globally.
- **UC Berkeley research intern (2017):** studied neural programmer-interpreters with Professor Dawn Song, SN Bose Scholars Program.
- **Microsoft software engineering intern (2016):** built dialogue-based chatbots for an internal business team.
